Одна и та же картинка, только отзеркаленная:

Лишний размер ресурса

8 png картинок на которых просто белые квадраты с текстом. Как по мне можно было бы сверстать:

Спрайт с картинкам. На странице используются не все:

Тяжёлая пнгшка размером с муравья. Можно было бы ещё и подсжать

Медленно загружающиеся ресурсы

Все картинки которые идут с [webget.community](#). Их там много. В основном это аватарки

Performance

записать и сохранить в файл профиль загрузки страницы

В файле profile.json

измерить время в миллисекундах от начала навигации до событий First Paint (FP), First Contentful Paint (FCP), Largest Contentful Paint (LCP), DOM Content Loaded (DCL), Load

fp - 473.5 ms

fpc - 473.5 ms

lcp - 1313.8 ms

dcl - 1083.7 ms

определить, на каком DOM-элементе происходит LCP

img

измерить, сколько времени в миллисекундах тратится на разные этапы обработки документа (Loading, Scripting, Rendering, Painting)

Если мерить по этому куску:

То вот столько:
